- Tablets
- Laptops
- Desktops
- Game Controllers

**Automobiles**

- Car Connectivity
- Driving Monitors
- Wi-Fi Hot Spots

Other Connected Devices

Are you sure you included everything? Any device that can get current content (news, weather, sports, reading material), update automatically, stream media, or interact with other devices is a connected device.

Having more or less than the average household is not important. It is based on your family's choices. What is important is knowing what you have and then securing the ones you use and disabling the ones you don't.

Any connected device has the potential to be a risk to your family's privacy or security. Consult your owner's manual, search the Internet, or ask your favorite computer expert to learn how to secure a device.

Once you've secured your devices, contact us to see how we can help you secure your financial future.
